

Announcement

Commencing Sept. 1st we will conduct a first class Grocery Business in the old Osborne & Pearson stand on S. McDuffie St. A complete line of staple and fancy groceries for you to select from. Best prices, courteous treatment, and prompt deliveries. Give us a trial.

McCormell & Osborne

SUITABLE FOR HUMAN FOOD

Nourishing Plants and Even Insects Capable of Sustaining Life, at a Pinch.

According to some reports great ingenuity in the use of scientific knowledge in extracting food values from unusual sources is being employed, the Baltimore Star states. There are many articles good for human food and wholesome food at that, which under ordinary conditions are not drawn upon at all. There are the angle worm, the grasshopper and fully a score of plants not ordinarily used as food which, properly prepared, constitute nourishing foods. It is perhaps only the most desperate and resolute sort of appetite that would stand for the earth worm, but they have been eaten even by highly civilized people and when properly prepared are said to be not so bad. Why should we be squeamish about the angle worm when we eat the oyster, stomach, lungs and everything but the shell?

As to grasshoppers they were an ancient delicacy and are yet so regarded by many races who know what's what in the way of good things to eat. All the grasses that are eaten by animals have nourishing juices. Clover and green timothy possess a higher food quality than cabbage or potatoes. Baked to tenderness they would prevent starvation. There have been famine periods when human beings have been obliged to eat field grasses and wild plant roots.

REALLY WAS NO MYSTERY

Seeming Puzzle of Two Sunsets in Two Minutes Easily Explained After a Little Thought.

A rambler was reading an incident that had been no part of his planning for that particular trip:

"It was like one of those moments the neurotic knows when he doubts the testimony of his senses and trembles with the fear that at last his mind is giving way. But the twain behind me exclaimed together at the phenomenon, and I breathed easily once more.

"Leaving Tarrytown toward five o'clock on a perfect afternoon, I settled back comfortably to enjoy the setting of the sun as it traveled with what seemed undue haste toward a high peak of the Palisades. Then, as if at a signal, it dropped behind the peak, leaving a dull brazen trail of its glory. I shut my eyes, a little disappointed at so hurried a closing of one of those days when it seems good to be alive.

"As the train jolted out of Grey-stone I blinked and beheld in upsetting wonderment the sun again going down, this time goldenly, slowly, with a fitting majesty of motion. Lower and still lower it sank, until there was visible only a lovely field of many-toned amber."

"But two sunsets?"

"The difference in altitude of the cliff towers at various points is the explanation."

Ever Hit Thumb With a Hammer?

Here is a little device which you can make at home by which the tiniest tack can be held without possibility of injury to the fingers. Take a strip of tin about three-quarters of an inch wide and about six or seven inches long. Shape it with a small slot in one end. Then double it, bending at the middle. When ready to insert the nail, put it into the slot, which will hold it by its head. This gives a kind of handle by means of which you can hold the nail perfectly upright while you hit it with the hammer. Of course the holder must be pulled away before the nail or tack has gone all the way into the wood. If you have not the tin at hand strong cardboard will serve the purpose. Try this little device just once and I am sure you will feel amply repaid for your trouble in making it, as it will prevent many a bruised finger.—Woman's Home Companion.

A Short Memory.

Uncle Jed was a trifle slack about quitting the bottom when the levee broke, and had to take to a tree. Morning came, and there was sixty feet of Mississippi flood water between him and shore. The preacher happened along on the high ground and saw Jed, but there wasn't any boat. Moreover, Jed's suspicion that there were alligators about was well founded.

The preacher besought Jed to swim, but in vain. Finally he called out:

"Jed, have faith. Remember how Jonah was cared for in the whale and saved after three days."

Jed spoke earnestly.

"Yes, sah, I remember. I ain' denyin' nuthin' 'bout Jonah, 'cause I wa'n't nigh um. But dis year alligator, he ain' no whale, sah. Alligator, he eat a nigger an' go off an' sleep a week, sur, an' disremember all 'bout dat nigger inside um!"

His Idea.

Those angelic-looking little boys, with golden curls, are usually just like other boys; a fact often overlooked by female relatives and other adoring ladies. One of this cherubic brand of small boy came back from school the other day rather depressed because he had no nickname.

"I spoke to the teacher about it," he vouchsafed, his big eyes opened wide, a mournful look about his angelic mouth. "I told her some nicknames that I'd like."

"And what were the names?" inquired a rapturous maiden aunt.

"Bunco Bill or The Sluggo," replied the angelic one.

DEMAND FOR SEED OF LEGUMINOUS CROPS

Columbia, Aug. 30.—As the fall season is approaching it is gratifying to note the great demand for seed for all the leguminous crops, for grain of all kinds and for hogs. There can no longer be any doubt that the farmers of the state of South Carolina are determined to rescue themselves from the financial abyss into which they have plunged through the excessive misuse of commercial fertilizers and through the habit of buying everything to eat away from home. Men are now writing to get seed for the clovers and vetch who have perhaps thought of the value of crops that could pump nitrogen from the air and store it in the soil for the succeeding crop. South Carolina has raised this year the greatest cow pea crop in her history and a great many of the farmers who secured inoculation for cowpeas through the state department of agriculture and the United States department of agriculture have sent to the department specimens from their fields, particularly where they had planted clover lots showing the roots of the plants carrying in many instances double the nodules of the uninoculated plant. These men are now securing inoculation for crimson clover, vetch and even burr clover though burr clover in the burr carries its own inoculation to a certain extent. The department is furnishing pure cultures delivered anywhere in the state before any legume at 40 cents per acre. The greatest need of the hour is lime, but as yet the reduced price cannot be quoted until the South Carolina crushing plant now under rapid construction can be completed. In the meantime reliance must be had upon the supply of ground limestone offered on the open market.

If the people of the state will now just as soon as possible get in a large acreage of leguminous crops and of grain and go more extensively into hog raising during the coming year, splendid results financially and in soil improvement are absolutely inevitable, and a long step will have been taken to break the grip of the all cotton yoke, which is even now again seriously worrying the people.

The state bureau is encouraging in every way the use of house grown seeds in legumes and as will be seen from the list of offerings the supply is still good.

Danger Of Gin-Mixed Cotton Seed

Washington, Aug. 26.—Few cotton growers realize when they take back seed from an ordinary gin to use in planting the next crop, the extent to which their seed may be mixed with the seed of the cotton ginned just previous to their lot. Yet this matter is of vital importance to all cotton raisers who wish to show a uniform variety of cotton. As every student of cotton breeding knows, even a few seeds of another variety in a cotton field may through cross-fertilization cause interbreeding and deterioration in a large number of plants. Instead of getting only a few seeds from a neighbor's lot of cotton, however, actual investigations by specialists of the department of agriculture show that in certain cases a lot of seed will contain as much as 14 to 16 per cent of seed left in the gin boxes from the cotton ginned just before. In the cases investigated not only has there been a large percentage of seed from the variety ginned just previously, but it is found that some seeds may remain from the second bale preceding. It follows, therefore, that a grower may very readily mix one or two other varieties with his special kind of seed.

Where a grower is particular about his seed, he can greatly minimize the mixing by quick, simple and inexpensive measures in which the average grower will be glad to cooperate. The following precautions, which seem to be entirely practicable and which, in fact, are now exercised in some localities, are strongly recommended in department bulletin No. 288, Custom Ginning as a Factor in Cottonseed Deterioration, soon to be issued.

The patron should accompany to the gin the lot of seed cotton from which he expects to save seed for planting, and he should aid the ginner in seeing that everything possible is done to prevent mixing.

He should see that the flues, feeders, and cleaners are cleaned as thoroughly as their construction will permit before he allows his seed cotton to enter them.

The roll should be dropped from the roll box and the box should be thoroughly cleaned. The dropping of the roll is an operation with which all ginners are familiar. The construction of the gins such that the roll

can be dropped and the box cleaned in a very few minutes. Some improved gins are arranged so that the roll box may be emptied without stopping the gin, thereby further simplifying the operation.

Having cleaned the machinery up to and including the roll box, the next step is to prevent the seed of the variety to be ginned from falling into the conveyor. It is impracticable to clean the conveyor satisfactorily, and therefore it should not be used when planting seed is to be obtained. By adjusting the position of the apron of each gin the seed can be made to fall upon the floor in front of the gin instead of into the conveyor. From here it can be sacked easily.

The floors about the gins should be cleaned to the extent that no seeds are left lying around to cause mixing. Careless spread upon the floor to receive the seed from the gins is often used.

Such precautions require time in which to carry them out effectively, and time spent in this manner naturally reduces somewhat the amount of ginning that otherwise could be done in a day. On this point the ginner may find cause to base objection to such procedure, but it should be possible to meet the objection by fully compensating him for the extra time consumed. The expense of special ginning in some sections may be reduced by arranging to have it done on specified days or at the close of the season, when more time is available. In any event, the amount of money that may be required to secure the ginner's cooperation in the maintenance of pure seed is almost negligible in view of the favorable effect such precautions will have upon the farmer's crops in succeeding years.

OUR PUBLIC FORUM

F. C. Howe
On The Advantages of Free Ports

Mr. F. C. Howe, Federal Commissioner of Immigration, who is one of the best American authorities on marine commerce, in discussing the relation of free ports to the development of sea trade said in part:

"Ships will go hundreds of miles out of their way to avoid ports surrounded by a tariff wall. The only way, therefore, for a country with a tariff to compete in the shipping world with a free-trade country is to establish free ports at strategic points along its coast line. Germany has done so, and in a comparatively short period has built up a carrying trade which before the war was seriously threatening England's supremacy. Hamburg, one of the three German free ports, now ranks as the second greatest seaport in the world, its total foreign commerce in 1912 being only \$5,000,000 under that of New York.

"The free port would offer great opportunity for financial operations, now made possible by the recent currency act. It would stimulate international banking, and would tend to shift the financial center of the world to this country. And America, by the logic of events, has become the natural center for the world's financing, just as London became that center several centuries ago, when it shifted from the cities of the Netherlands. But the financial center will only move to this country when it becomes a clearing house of goods as well as of money. For credit the world over is created by currently created wealth in transit or change so that our financial expansion is dependent upon the opening up of American ports to the clearance of the wealth of the world. A port should not operate to yield a return on the investment, but to develop the prosperity of the country." In recapitulating the advantages, Mr. Howe brings out the importance of the free port in developing our shipping and linking us with South America, Asia and Africa, and then concludes:

"The most important gain is the direct gain to America. It will cheapen commodities by bringing great quantities of goods to our doors for importation or export, as trade needs demand. It will stimulate the growth of exporting houses, which can hold goods for an indefinite period without payment of tariff duties (often equal to the cost of the article itself) for disposal to meet the trade demands of the whole world. It will uphold international credit and shift to America an increasing and ultimately a predominant share in international exchange.

"Finally, America is the natural country to be the cradle of the world. Its resources face every other continent; it is the greatest of all reservoirs of raw materials and foodstuffs. In iron and steel and standardized production it is in a position to compete with the world. But international trade (and this is always overlooked) must be reciprocal. It cannot be one-sided. And credit balances cannot for any prolonged period be paid in gold. They can only be paid by exchange of wealth."

More Disorder in Haiti.
Washington, Aug. 30.—Fear Admiral Caperton reported that there were small disorders at Cape Haytien last Saturday, but no details. Otherwise order prevailed at all the place under American control. The gunboat Sacramento will join Admiral Caperton's squadron soon.

Brakeman Was Cured.
F. A. Wootsey, a railroad brakeman of Jacksonville, Texas, writes: "I was down with kidney trouble and rheumatism so bad I could hardly get up when I sat down. I had a backache all the time and was almost tired of living. I saw Foley Kidney Pills advertised. I took some and after a short time I was thoroughly cured and am having no more trouble." They act promptly and help kidneys throw poisonous waste products out of the blood. Thousands have written similar letters. Sold everywhere.

"Private John Allen Dead."
St. Louis, Aug. 30.—John Henry Allen, pioneer cotton broker, and confederate veteran, brought here as "Private John Allen," a former Mississippi congressman died here last night at the age of seventy-two.

Sickness Common in Summer.
Hay fever is attributed to pollen floating in the air, while asthma is caused by dust and certain atmospheric conditions common in summer. Sufferers who can, seek the mountains or the sea. Hay fever and asthma victims compelled to remain at home will find relief in Foley's Honey and Tar Compound which always the inflammation, soothes and heals raw and rasping bronchial tubes and helps to overcome difficulty in breathing, and makes sound, refreshing sleep possible. Sold everywhere.

M. & O. Ships on Full Time.
Mobile, Ala., Aug. 30.—Seven hundred men were added to the payroll of the Mobile and Ohio railroad shops at Whistler. The shop has been placed on full time basis for the first time since October 5th of last year.

A man of ability is one who is able to draw his pay regularly.

Postponing Old Age.
Overworked, weak or diseased kidneys will often make a man or woman feel old before middle age. Rheumatism, aches and pains in back, puffiness under eyes, stiff joints and sore muscles, biliousness, headache and various other symptoms give warning that the kidneys need help. Foley Kidney Pills bring a sound, healthy condition and help the kidneys eliminate uric acid and other poisons from the system, which, when permitted to remain, cause dangerous disease. Sold everywhere.

ROAST

A NICE BIG ROAST

of Beef, Pork or Mutton is really one of the best meats. For it is just as good cold as hot. So you can have several meals with only one cooking.

Tell us to send one for Sunday dinner. Make it a big one, for our meats are so choice that only a big one will have enough left to eat up old.
